

SUCTION NOZZLE CARRIER

ABSTRACT OF THE DISCLOSURE

A suction nozzle carrier for use with a vacuum suction apparatus to suck workpieces is disclosed to include a carrier
5 having a plurality of receiving holes connected to the vacuum suction apparatus, and a plurality of suction nozzles respectively mounted in the receiving holes and adapted to suck workpieces upon operation of the vacuum suction apparatus, each suction nozzle having a valve block, a valve element movably mounted in
10 the valve block and adapted to close/open the valve block, and a spring member supporting the valve element in the valve block and adapted to force the valve element to close the valve block.
